Campus food-ordering platform

In production

Ordering, delivery and payments for university campuses. Live on the App Store and Google Play, with four native apps and two web portals on one AWS backend.

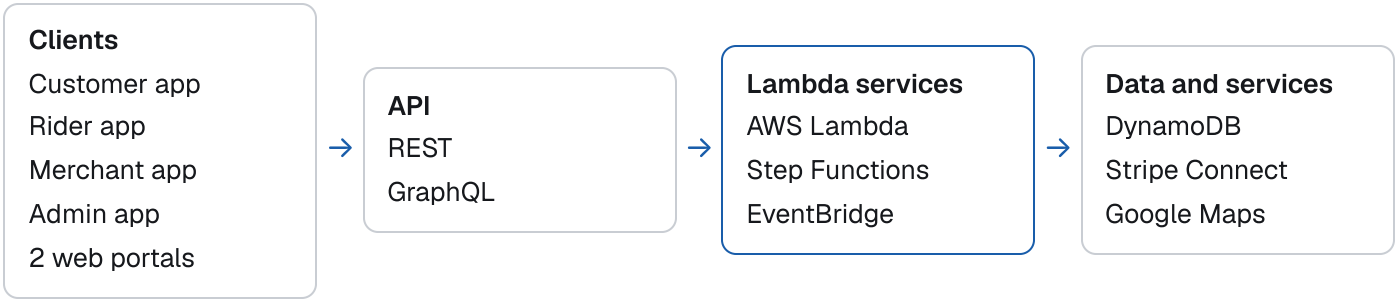

Sole engineer, independent contractor · Dec 2022 – present · Client kept confidential

9
campuses

15,000+
orders

219
merchants

HOW IT FITS TOGETHER

ENGINEERING STORIES

The double charge

PROBLEM

Retries created a new idempotency key, so some customers were charged twice.

FIX

Made every retry reuse the payment's original idempotency key.

RESULT

A retried payment no longer creates a second charge.

4M reads a day

PROBLEM

Database reads were far higher than the traffic explained.

FIX

Traced the reads to a client loop and fixed it on the server.

RESULT

About 4M fewer database reads every day.

One-command releases

PROBLEM

Four apps each needed builds for TestFlight, the App Store and Google Play.

FIX

Built one release pipeline that covers every app and store.

RESULT

One command ships all four apps.

Also built

Payments with Stripe Connect and two campus meal-plan systems, including split payment · Dispute and chargeback handling · Automatic rider assignment behind release locks · Audit logs for admins and vendors · Tiered Google Maps caching

D-Touch Health Platform

Pre-launch

Clinic management SaaS for many clinics on one backend: booking board, tooth charting, billing with GCash and QR Ph, and CSV import with undo.

Sole engineer · Jan 2024 – present · Rewritten from Flutter to React Native · Running on test data only

4
apps on one backend

77
row-level security policies

187
tests

HOW IT FITS TOGETHER

4 React Native web apps
Also build as Android apps

→

Supabase
One backend for all clinics

→

PostgreSQL
Row-level security
Booking constraints
Audit log

ENGINEERING STORIES

Permissions in the database

PROBLEM Many clinics share one database, so a bug in any app could expose another clinic's data.

FIX Enforced every permission in PostgreSQL with row-level security.

RESULT 660+ automated database tests prove each clinic sees only its own data.

No double-booking

PROBLEM Two staff members can book the same slot at the same time.

FIX Added a database constraint that rejects overlapping bookings.

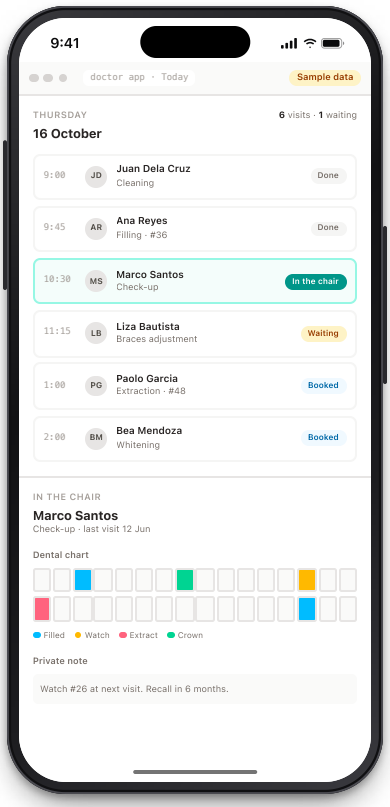

RESULT Double-booking is impossible, whichever app sends the request.

An audit log no client can skip

PROBLEM A log written by the apps only works if every app remembers to write it.

FIX Moved audit logging into the database itself.

RESULT Every change is recorded, and no client can skip it.

Doctor's day view, drawn mock-up. Made-up patients; no real patient information.

Presyo

Live

presyo.pages.dev

Philippine price tracker. A Python pipeline reads government and store sources into an Expo app with no backend.

Sole engineer · Python, Expo, GitHub Actions

19
government and store sources

1,736
places covered

2×
updates a day

HOW IT FITS TOGETHER

Sources
DA, PSA, DOE, DTI, DOH, BSP, Meralco and others

→

Python pipeline
GitHub Actions, twice a day

→

Static JSON
No server

→

Expo app
Reads the JSON directly

WHAT IT COVERS

- Prices for 39 wet markets.
- Gadget prices with history and price-drop alerts.
- Feeds the meal planner in Gawain with real prices.

ENGINEERING STORIES

Messy place names

PROBLEM Sources write the same town many ways, like "Sta. Cruz" or "City of Cebu".

FIX Matched every name to a list of 1,736 official places.

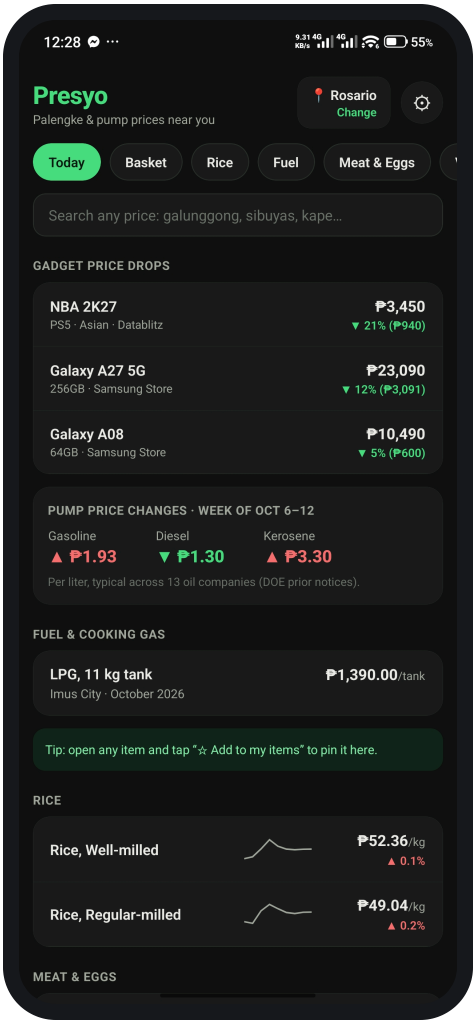

RESULT Prices land in the right town.

One broken source doesn't stop the rest

PROBLEM A bad government PDF could break the whole update.

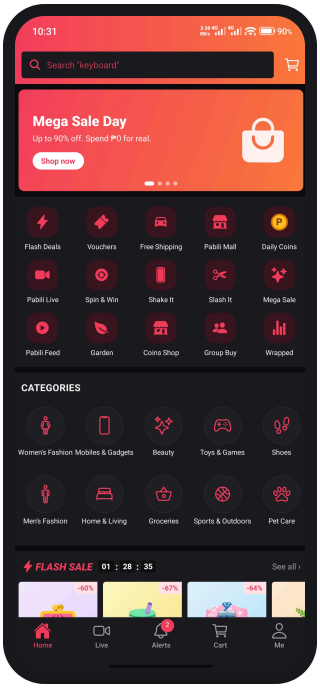

FIX Made each of the 19 sources fail on its own.

RESULT A broken source skips only itself; the rest still update.

Home screen: market, fuel and gadget prices near you.

More apps

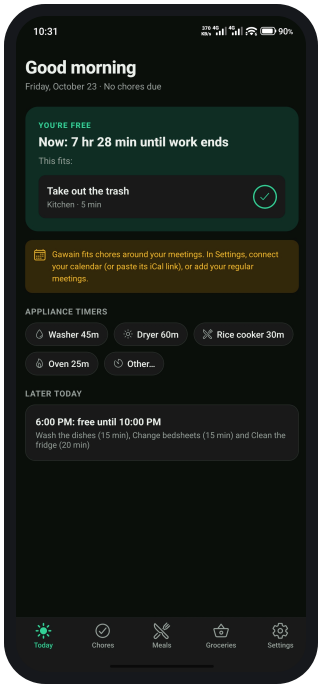

Pabili Live

Shopping app concept with cart, vouchers, checkout, order tracking, live selling and a "Wrapped" summary.

Expo · Web and Android

pabili.pages.dev

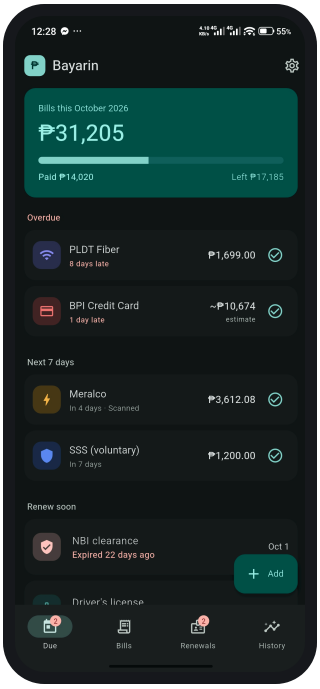

Gawain Live

Fits chores into the gaps between meetings and plans weekly meals priced with Presyo data.

Expo, Supabase · 107 tests

gawain-ccn.pages.dev

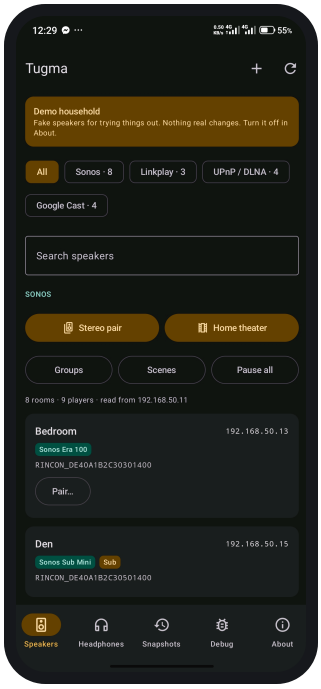

Bayarin Live

Reads a bill photo on the device and fills in the amount and due date.

Flutter, ML Kit

bayarin-3q5.pages.dev

GitHub ↗

Tugma In progress

Open-source speaker controller for Sonos, DLNA, Linkplay and Google Cast, with headphone EQ. Not yet tested on real speakers.

Kotlin

GitHub ↗

Sine In progress

Android TV video player with Dolby Vision, Atmos passthrough and SMB, Jellyfin and Plex sources.

Kotlin, Media3, libmpv

GitHub ↗

Groundwork Source only

AI documentation agent that answers from docs, checks its own citations and is tested on 50 questions.

Python, LangGraph, Claude API

GitHub ↗

SKILLS

Mobile & frontend	Flutter, Dart, React Native, Expo, React, Kotlin
Backend	Node.js, TypeScript, Python, REST, GraphQL
Cloud & data	AWS serverless, Supabase, PostgreSQL, Cloudflare
Tools	Stripe Connect, GitHub Actions, fastlane, EAS, Docker
